07.19.2023

## Importing Tables that Contain a Date or Value from Countries that use Different Standards

The United States Standard for date is Month, Day, Year

The UK Standard for date is Day, Month, Year

? What would happen if we imported UK Dates into our Table?

We would get an error starting on the 13th of the Month

 We can Update the locale used to recognize the date format, and remedy the error

We need to make sure all the data types in our column are the same

Click the Column Header

Click the Using Locale... Option

The Change Type with Locale Box Pops Up

Data Type Drop Down: Date Value

Locale Drop Down: English (United States)

Check the Column Header for the Calendar Icon

Make sure there are no Errors in the Column
