Type of Data Connectors <Doc 000019X-Day 00006Y BI>

Monday, July 31, 2023   4:00 PM

07.05.2023

At the Top of the Report View Inside the Home Option Click the Get Data Option

The Common data sources Box Pops Up

Click the More… Option

The Get Data Box Pops Up, You'll see all the Possible Data Connections that Power BI can make

★ Connecting to the Folder Option in the Get Data Box means that whenever a new Data file is added to that folder Power BI will blend those all those files together automatically

★ Connecting to the Web option means that you'll scrape data from a website directly

For our course we will be using only CSV Files, however, because Microsoft has standardized all of these connections, what we go over will still work for any of these sources as long as the connection is set up correctly

Click the Text/CSV Option

Find and Select the AdventureWorks Territory Lookup Excel File

The AdventureWorks Territory Lookup.csv Box Pops Up

→ If you Click the Green Rectangular Load Button then…

　　　the Data will Load Directly into the Data Model

→ If you Click the White Rectangular Transform Data Button then the Data will Load into the Query Editor

　　　We'll Click the White Rectangular Transform Data Button

　　　The AdventureWorks Report - Power Query Editor Box Pops Up

　　　Name Field: Territory Lookup Value

　　　Click the Save Button

　　　The Microsoft Power BI Desktop Box Pops Up

　　　Click the Green Rectangular Apply Button
